PROFESSIONAL SUMMARY

Motivated Information Technology and Business Systems graduate with practical experience developing web applications and software projects using JavaScript, HTML, CSS, Java, Git and GitHub. Experienced in debugging, troubleshooting, testing functionality, implementing features, and working through technical problems systematically.

Through academic work and personal software projects, I have developed an understanding of the software development lifecycle, including requirements, implementation, debugging, testing, version control, and documentation. I enjoy investigating technical problems, learning new technologies, and improving existing functionality.

Seeking an entry-level software development opportunity where I can contribute to real-world applications while learning from experienced developers and developing strong professional software engineering practices.

TECHNICAL SKILLS

Programming & Development

- Java

- JavaScript
- HTML5
- CSS3
- Python
- Object-Oriented Programming
- Basic Data Structures & Programming Logic
- Responsive Web Development

Software Development

- Debugging & Troubleshooting
- Feature Development
- Bug Investigation
- Functional Testing
- Code Improvement
- Requirements Understanding
- Technical Documentation
- Software Development Lifecycle

Tools & Technologies

- Git
- GitHub
- Visual Studio Code
- IntelliJ IDEA
- NetBeans
- Node.js / npm
- React

Databases & Systems

- SQL
- Database Concepts
- Information Systems
- Business Systems
- Systems Analysis
- Business Analysis

EDUCATION

Rosebank College

Bachelor of Information Technology in Business Systems

Completed: 2026

Relevant coursework:

- Programming
- Web Development
- Business Analysis
- Database Systems
- Information Systems
- Systems Analysis
- Information Risk Management
- IT Research

SOFTWARE DEVELOPMENT PROJECTS

REALM — AI-Powered Community Platform

Technologies: JavaScript, React, HTML, CSS, Git, GitHub, Base44

- Developing a web-based platform designed around online communities, user-generated content, and AI-assisted functionality.
- Implemented and worked with application functionality including authentication, user profiles, navigation, settings, and structured application workflows.
- Investigated and resolved technical issues encountered during development.
- Implemented new functionality and improvements as the application evolved.
- Worked with frontend components and application logic to create and refine user-facing functionality.

- Tested changes during development to identify issues and verify that functionality worked as expected.
- Worked with Git/GitHub to maintain project versions and track development progress.
- Investigated a React/Vite dependency issue involving multiple dependency-cache versions and resolved the application conflict through dependency configuration.
- Developed an understanding of separating application functionality into structured components and maintaining consistency across the application.
- Applied structured problem-solving when implementing changes and troubleshooting unexpected behavior.

Key Skills Demonstrated:

Debugging • Feature Development • Testing • React • JavaScript • Git/GitHub • Problem Solving • Application Development

Bridge-to-Learning — Educational Consulting Website

Technologies: HTML, CSS, JavaScript, Git, GitHub

- Designed and developed a multi-page website for an educational consulting initiative.
- Built structured pages and navigation to provide users with a clear and accessible browsing experience.
- Implemented HTML and CSS layouts and styling for consistent presentation across pages.
- Used JavaScript to support interactive functionality where required.
- Tested pages and functionality during development to identify and resolve display and implementation issues.
- Debugged code and refined functionality to improve the overall user experience.
- Used Git and GitHub for version control and project management.
- Maintained a structured project repository and documented development changes through commits.
- Considered usability, maintainability, and clarity when implementing website functionality.

GitHub: github.com/Antidote857/bridge-to-learning

Key Skills Demonstrated:

HTML • CSS • JavaScript • Debugging • Testing • Git • GitHub • Responsive Design • Web Development

PROFESSIONAL EXPERIENCE

Mr. Price

Work Integrated Learning

- Gained practical exposure to technology and information systems within a professional business environment.
- Developed an understanding of how software and IT systems support business operations.
- Applied structured problem-solving when dealing with technology-related tasks and issues.
- Worked within a professional environment requiring communication, accountability, and attention to detail.
- Developed an understanding of following established processes and completing assigned responsibilities within expected timeframes.
- Strengthened professional communication and teamwork skills.

DEVELOPMENT & TECHNICAL EXPERIENCE

Web Development Tutor

First-Year Students

- Assisted first-year students with web development concepts, programming logic, debugging, and technical problem-solving.
- Investigated coding errors and helped students identify the underlying causes of technical issues.
- Explained programming concepts and development approaches clearly to students with different levels of technical understanding.
- Guided students through structured approaches to debugging rather than simply providing solutions.
- Reinforced good development practices including readable code, testing, and logical problem-solving.
- Developed strong communication skills through explaining technical problems and solutions.

ACADEMIC SOFTWARE DEVELOPMENT EXPERIENCE

Java Programming

- Developed Java programs using object-oriented programming principles.
- Worked with variables, conditional statements, loops, methods, arrays, strings, user input, and randomization.
- Applied logical programming techniques to solve structured problems.
- Debugged programming errors and tested program behavior.
- Worked with Java development environments including NetBeans and IntelliJ IDEA.

Business Systems & Analysis

- Analyzed business requirements and considered how software systems can address organizational problems.
- Applied systems analysis and business analysis concepts to understand users, processes, requirements, and potential technology solutions.
- Developed an understanding of the relationship between software, data, business processes, and organizational objectives.

CORE COMPETENCIES

- Software development
- Debugging and troubleshooting
- Logical problem-solving
- Feature implementation
- Functional testing
- Code maintenance
- Git and version control
- Technical documentation
- Independent learning
- Attention to detail
- Task ownership
- Clear communication
- Team collaboration
- Adaptability
- Willingness to learn

LANGUAGES

- English
- Zulu
